iOS & Mac Developer

Phone: +1.925.413.6180

Email: kolin@kolinkrewinkel.com

2703 Pickfair Lane, Livermore, CA, 94551

Selected Experiences

- Facebook (2014)

  Interned for three months (originally a full-time offer, but due to high school constraints, opted for internship.) Worked on Mobile Infrastructure for the Facebook for iOS app as a mock-full time employee.

- Polychromatic (2014)

  Developed and released an open source plugin for Xcode 5-6 that uses a concept termed "semantic highlighting," which highlights by variable, rather than by type. The plugin was later featured in NSHipster and now has over 700 stars.

- KKTokenTextView (2013)

  Brought the pill-style recipient/link-editing interface of Mail to rich text views on iOS. High-performance, and easy inline-editing with minimal configuration on the part of the client.

- Stream for iPhone (2012-2013)

  Developed a fully-fledged, high-performance social networking client for app.net. It featured background posting, Core Data persistence, full attachment support, multiple accounts, and beautiful, custom designs for every view. Also featured rich push notifications on our own, bespoke server-setup.

- SeatGeek (2011, 2013)

  Worked remotely with the SeatGeek team (who recently received another round of funding) to polish and refine their iOS apps.

- KKGridView (2011-2012)

  Open-sourced a high performance collection view, prior to the existence of UICollectionView. Offered the highest performance of any grid view, with editing support, and widespread usage, including Spotify. Collective

estimates place it as having ran on over 5 million devices, and acquiring over 800 stars from developers.

- [Open Home Pro](#) (2012)

  Refined the Open Home Pro real-estate app, which has served nearly 50,000 agents.

- [Stratus for iOS](#) (2011-2012)

  Created popular app, Stratus, with Jeff Broderick. With background uploading, rich, high-performance file-viewing, and easy sharing to social networks, Stratus was also downloaded tens of thousands of times. The custom interface was custom-crafted before the existence of UIAppearance/any customizability within UIKit.

- Emoji+ (2011)

  My initial foray into the App Store, Emoji+ was a simple emoji-enabler application which was downloaded thousands of times and was localized to many different languages.

Education & Associated Achievements

- Granada High School (2012-2016)

  First-in-class freshman year; top 10% sophomore year. Currently enrolled in junior year. Scientifically published via biotechnology course.

- Mendenhall Middle School (2009-2012)

  Reach state semi-finals in National History Day for the group-website category; graduated receiving Principal's Honor Roll every class unit (trimester).
